Q9 - What did you like MOST about the class?	
Faculty:	Xiaolin Shi
Response Rate:	85.71% (6 of 7)
1	everything is explained clearly in the powerpoint and notes
2	This lesson is very organized
3	She was very enthusiastic about teaching
4	Professor provided a multitude of visuals to explain statistics problems.
5	My favorite part about this class was the detailed PowerPoints. Since some of the information was new to me I appreciated that rather than just lecturing at us for 3 hours she created PowerPoints for us to look back on. She also always used her iPad to create graphics in order to relate what was written on the PowerPoints with a real world example (and visual).
6	I really enjoyed the first project and working with excel.

Q10 - What did you like LEAST?	
Faculty:	Xiaolin Shi
Response Rate:	85.71% (6 of 7)
1	the class itself is a little challenging
2	The second project being assigned so late.
3	The class was massively challenging
4	Some in class exercises were a little confusing to follow.

5	Since we only met once during the week, I wish the homework would be due after the next class in case we had any questions. Considering that the homework is graded on correctness, I wish I had more time to ask questions about the problems if I was confused.
6	None

Q11 - What specific incidents/actions most affected your opinion of the class?	
Faculty:	Xiaolin Shi
Response Rate:	71.43% (5 of 7)
1	Professor Shi's thoroughness every class.
2	On one example question, there was a lot of material written out by hand, but the handwriting was very cluttered and it was difficult to follow the overall flow of the problem.
3	I was unable to learn or retain most information covered in class because of the speed and organization
4	I feel good that the homework is like the practice exercise
5	I enjoyed that Professor Shi took her time teaching to make sure that everyone understood each chapter. I remember the second week of class we were learning about one of the most important chapters that would be implemented in all the following chapters. The amount of information in the chapter was overwhelming. Rather than spit out facts to us in order to get through the entire chapter and move onto the next, she took the entire two class periods in order to make sure we understood and would be able to complete problems using this information on our own. Professors I have had in the past would probably have just given us a quick lecture that no one would fully understand, and I appreciated that she cared more about us understanding the material rather than getting through everything by the end of the semester.

Q12 - How could this class be improved?	
Faculty:	Xiaolin Shi
Response Rate:	71.43% (5 of 7)
1	Simpler teaching methods
2	More examples but less material written by hand - more PowerPoint presentations would be helpful in explaining the larger concepts at hand.
3	Mandatory Attendance
4	I think that going through more examples and problems for each chapter would help students understand the material better. Since it was a night bomb more interaction would help students stay more engaged in such a long class.
5	I think the group project is kind of meaningless; it's hard to split the project up to several people. Maybe using individual assignments or homework to replace the group project will be better.
